Washington,DC 20554

Please DO NOT change the telephone regulations that would affect Indiana's privacy laws in any way. Those unwanted ,mostly computer generated telephone calls,are NOT wanted.

Also, since the EAS (emergency warning system) is Required by the FCC for all Radio Stations to have and operate, all telephone companies should be required to furnish radio stations a dedicated telephone line from studio to transmitter, free of charge. This is a Life Saving service provided by all Licensed Radio Stations to their Communities. It is the only contact the outside world would have for Emergency Information in case of Tornado, Flood, or other catastrophe . In many cases the Telco line is the only connection the local radio station has from studio to transmitter. And now, with the new Home Defense Department, it is even more important.

Yours truly
